-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 38, 40, 50, 51, 52, 59, and 60 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cook '214 (Cook) in view of Fujii.

Cook discloses the claimed method with the exception of the means for locking the handle and barrel to one another. However, as disclosed by Fujii it is known in the art to use a transverse locking pin to lock separate longitudinally joined portions of the bat together. It would have been obvious to one of ordinary skill in the art to have used such on Cook's bat as well to better secure the barrel portion to the handle portion.

Regarding claim 40, the examiner takes official notice that roll pins are commonly known. Such a pin would obviously have been suitable for a deformable pin such as Fujii's pin if such were the most readily available to the ordinarily skilled artisan.

Concerning claim 51, Cook does not disclose the exact angle but absent a showing of unexpected results the claimed angle would not have been unobvious in view of Cook's disclosure.

Claims 39, 41-49 and 53-58 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Tribble '006 has been cited for interest because it discloses a similar locking system to that currently being claimed.
